Subject: Intimation pursuant to Regulation 30 of the SEBI (LODR) Regulations, 2015 regarding Launch of New Product

Dear Sir/Madam,

Pursuant to Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, this is to inform you that the Corporation has announced the launch of its new product available for sale from April 10, 2024.

The details of the said product are as follows:

a) Name of the Product	STERGIC Syphilis Ab Rapid Test Kit
b) Date of Launch	29 April 2024
c) Category of Product	In-Vitro Diagnostic Kit
d) Whether caters to domestic and international markets	Caters in Domestic Market

Please take the above information on record and arrange for dissemination.

Yours faithfully,

For Royal Sense Limited

Rishabh Arora
Managing Director
DIN: 09745543

Royal Sense Limited is excited to announce the official launch of our latest diagnostic product, the STERGIC Syphilis Ab Rapid Test Kit. This innovative test kit is designed to detect antibodies against the bacterium Treponema pallidum, which causes syphilis.

Product Features:

The STERGIC Syphilis Ab rapid kit is a diagnostic tool used to detect antibodies against the bacterium *Treponema pallidum*, which causes syphilis. These kits typically use a lateral flow immunoassay technique to detect the presence of antibodies in a patient's blood sample.

Here are some key details about STERGIC Syphilis AB rapid kits:

Principle: They work based on the principle of antigen-antibody interactions. The kit contains antigens specific to *Treponema pallidum*, which reacts with antibodies present in the patient's blood sample if they have been exposed to the bacterium.

Components: A typical STERGIC Syphilis Ab rapid kit includes test cassettes, sample diluent, droppers, and instructions for use.

Procedure: The procedure usually involves adding a small amount of the patient's blood to a test cassette and then adding a specific solution or diluent. The test cassette will show results within a specified time frame, typically ranging from a few minutes to about 15-20 minutes.

Interpretation of Results: The results are interpreted visually. A positive result indicates the presence of syphilis antibodies in the patient's blood, suggesting exposure to *Treponema pallidum*.

A negative result suggests the absence of these antibodies. It's important to follow the manufacturer's instructions carefully for proper interpretation.

Accuracy: While rapid syphilis tests are generally reliable, false positives and false negatives can occur. Confirmatory testing may be necessary in cases where there is uncertainty or when a more definitive diagnosis is needed.

Availability: STERGIC Syphilis AB rapid kits are available commercially and are often used in clinics, hospitals, and public health settings for rapid screening and diagnosis of syphilis.

Limitations : Like any diagnostic test, STERGIC Syphilis AB rapid kits have limitations. They may not detect early infections (during the window period) when antibody levels are low, and they may not differentiate between past and current infections without further testing.

It's important to note that while rapid tests provide quick results, they should be followed up with confirmatory testing, especially in cases where the results are positive or if there is clinical suspicion of syphilis. Treatment and management should be guided by healthcare professionals based on comprehensive evaluation and test results.

About Royal Sense Limited: Royal Sense Limited is a leading provider of innovative diagnostic solutions for healthcare professionals worldwide. With a focus on quality, reliability, and accessibility, we are dedicated to improving patient care and advancing the field of medical diagnostics.
