**Scrip Code: 544143**

**BSE Symbol: ROYAL**

**Subject: Intimation pursuant to Regulation 30 of the SEBI (LODR) Regulations, 2015 regarding Launch of New Product**

Dear Sir/Madam,

Pursuant to Regulation 30 of the Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015, this is to inform you that the Company has announced the launch of its new products which are as follows available for sale from 14<sup>th</sup> January, 2025.

The details of the said products as required under SEBI Circular No. SEBI/HO/CFD/CFD-PoD1/P/CIR/2023/123 dated 13th July, 2023, are as follows:

<b>a) Name of the Products</b>	<ol style="list-style-type: none"> <li>1) Ugmntin 625 Tablet</li> <li>2) Stergimox 250 Capsules</li> <li>3) Trnxa Tablet</li> <li>4) Trnxa MF Tablet</li> <li>5) NDEM 4 MG Tablets</li> <li>6) EF.TUM 250 Tablets</li> <li>7) JCZ-M Tablets</li> <li>8) ONLOX 200 Tablets</li> <li>9) ONLOX OZ Tablets</li> <li>10) Mftal Tablets</li> </ol>
<b>b) Date of Launch</b>	14 <sup>th</sup> January 2025
<b>c) Category of Product</b>	Pharmaceuticals
<b>d) Whether caters to domestic and international markets</b>	Caters in Domestic Market

Please take the above information on record and arrange for dissemination.

Yours faithfully,

**ROYAL SENSE LIMITED**

**Royal Sense Limited is excited to announce the official launch of our latest products in  
Pharmaceutical Category**

*Here are some details you might find in the launched products:*

**1) Ugmntin 625 Tablet**

**Details:** Ugmntin 625 Tablet is combination of combination of Amoxicillin 500mg and Clavulanic Acid 125mg in syrup form.

**Description:** Ugmntin 625 Tablet is combination of combination of Amoxicillin 500mg and Clavulanic Acid 125mg in syrup form is used to treat a variety of bacterial infections. Amoxicillin, a penicillin-class antibiotic, works by inhibiting bacterial cell wall synthesis, making it effective against a broad range of Gram-positive and Gram-negative bacteria. Clavulanic Acid is a beta-lactamase inhibitor that prevents certain bacteria from producing an enzyme (beta-lactamase) that would otherwise break down Amoxicillin, thus enhancing its effectiveness, particularly against resistant strains. This combination is commonly prescribed for infections such as respiratory tract infections, urinary tract infections, ear infections, and sinusitis. The syrup form is suitable for children or individuals who have difficulty swallowing tablets. It should be taken under a healthcare provider's guidance to minimize side effects and prevent resistance.

**2) Stergimox 250 Capsules**

**Details:** Stergimox 250 Capsules having ingredients Amoxicillin 250mg capsules are used to treat bacterial infections, effective against a wide range of Gram-positive and Gram-negative bacteria.

**Description:** Stergimox 250 Capsules having ingredients Amoxicillin 250mg capsules are a commonly prescribed antibiotic used to treat a variety of bacterial infections. It belongs to the penicillin class of antibiotics and works by inhibiting the synthesis of bacterial cell walls, which ultimately leads to the destruction of the bacteria. Amoxicillin is effective against a wide range of Gram-positive and Gram-negative bacteria, making it useful for treating conditions such as respiratory infections (like pneumonia and bronchitis), urinary tract infections, ear infections, and skin infections. It is typically taken orally, and the dosage depends on the severity of the infection and the patient's health condition. Common side effects include nausea, diarrhea, and allergic reactions. It is important to complete the full prescribed course to prevent antibiotic resistance.

### 3) Trnxa Tablet

**Product Description:** Trnxa Tablets contains Tranexamic acid is a medication used to reduce bleeding by preventing the breakdown of blood clots, often used in surgery.

**Product Details:** Trnxa Tablets contains Tranexamic acid is a medication used to treat or prevent excessive bleeding by inhibiting the breakdown of blood clots. It works by blocking the action of plasminogen, a substance that is involved in the process of fibrinolysis (clot breakdown). This helps to stabilize blood clots and reduce bleeding, especially in conditions like heavy menstrual bleeding, post-surgical bleeding, or bleeding disorders like hemophilia. Tranexamic acid is also used in trauma or surgeries to control blood loss. It can be taken orally in tablet form or applied topically, depending on the condition being treated. Side effects are generally mild but may include gastrointestinal upset, headaches, or dizziness. Care should be taken when using tranexamic acid in patients with a history of blood clots or kidney problems.

#### 4) Trnxa MF Tablet

**Product Description:** TRNXA MF tablets contain tranexamic acid and mefenamic acid, used to treat heavy menstrual bleeding and associated pain.

**Product Details:** TRNXA MF Tablets are a combination medication containing tranexamic acid and mefenamic acid. This formulation is primarily used to treat heavy menstrual bleeding (menorrhagia) and associated pain.

- Tranexamic acid works by preventing the breakdown of blood clots, thus helping to reduce excessive bleeding.

- Mefenamic acid, a nonsteroidal anti-inflammatory drug (NSAID), helps alleviate pain and inflammation.

Together, these two components work to control both the bleeding and discomfort during menstruation. TRNXA MF tablets are typically prescribed for women with heavy periods to manage symptoms effectively.

Common side effects may include gastrointestinal upset, nausea, or headaches. The medication should be used under medical supervision, especially for those with a history of bleeding disorders or kidney problems.

## 5) NDEM 4 MG Tablets

**Description:** NDEM 4 mg Tablet contains ondansetron, used to prevent nausea and vomiting caused by chemotherapy, surgery, or other medical treatments.

**Details:** Ndem 4 tablet is a medication primarily used to treat nausea and vomiting, often associated with conditions like motion sickness, chemotherapy, or post-operative recovery. It contains ondansetron, a selective 5-HT3 receptor antagonist, which works by blocking the action of serotonin, a chemical in the body that can trigger nausea and vomiting.

Ndem 4 is available in tablet form and typically prescribed in 4 mg doses, although the dosage may vary based on individual needs and conditions. The medication is commonly used to prevent nausea and vomiting following chemotherapy, surgery, or other medical treatments.

Common side effects include headache, constipation, dizziness, or fatigue. Rare but serious side effects can include allergic reactions or heart rhythm abnormalities. It should be used under the guidance of a healthcare provider.

## 6) EF.TUM 250 Tablets

**Details:** EF.TUM 250 (cefuroxime 250) a Second-generation cephalosporin antibiotic, treats bacterial infections (respiratory, urinary, skin, ear, throat), 250mg tablets/capsules, twice daily.

**Description:** EF.TUM 250(Cefuroxime 250), is a broad-spectrum antibiotic belonging to the second-generation cephalosporin class. It is used to treat various bacterial infections, including respiratory tract infections, urinary tract infections, skin and soft tissue infections, and gonorrhea.

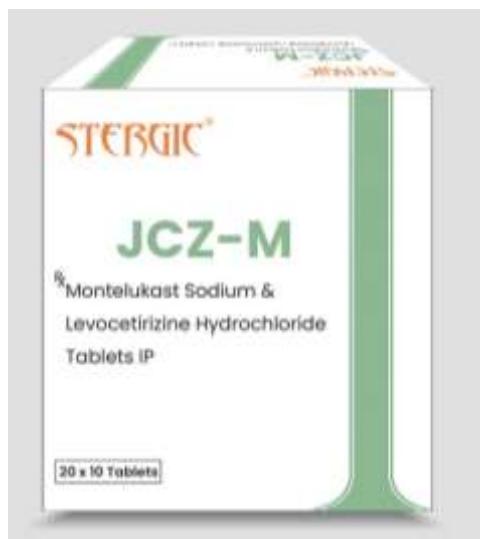

**Key Features:**

1. Strength: 250 mg
2. Dosage: Typically 250-500 mg twice daily for 7-10 days
3. Mechanism: Inhibits bacterial cell wall synthesis
4. Spectrum: Effective against Gram-positive and Gram-negative bacteria
5. Absorption: Well-absorbed orally, with peak plasma levels within 2 hours
6. Side effects: Nausea, vomiting, diarrhea, and allergic reactions (rare)

**Precautions:**

1. Contraindicated in patients with cephalosporin or penicillin allergies
2. Use with caution in patients with renal impairment or pregnancy
3. Monitor for signs of pseudomembranous colitis

**7) JCZ-M Tablets**

**Product Description**

JCZ M tablets contain levocetirizine and montelukast, used to treat allergies, hay fever, and asthma symptoms by reducing inflammation.

**Product Details**

JCZ M Tablets are a combination medication containing levocetirizine and montelukast, commonly used to treat allergic conditions such as hay fever, seasonal allergies, and asthma.

1. Levocetirizine is an antihistamine that works by blocking histamine receptors, helping to relieve allergy symptoms like sneezing, runny nose, and itchy eyes.

2. Montelukast is a leukotriene receptor antagonist that helps reduce inflammation in the airways, making it particularly useful in managing asthma and preventing asthma attacks.

Together, these two components work synergistically to alleviate symptoms of allergies and asthma, improving breathing and reducing inflammation. JCZ M tablets are typically taken once daily, but the dosage may vary based on the individual. Side effects may include dizziness, headache, dry mouth, or gastrointestinal discomfort. Always use under medical supervision.

#### **8) ONLOX 200 Tablets**

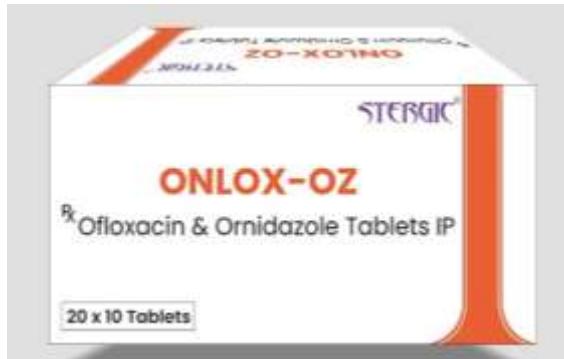

**Product Description:** ONLOX 200 contains ofloxacin, an antibiotic used to treat bacterial infections like UTIs, respiratory infections, and skin infections.

**Product Details** ONLOX 200 is an antibiotic medication containing ofloxacin, a fluoroquinolone class drug. It is used to treat various bacterial infections by inhibiting bacterial DNA synthesis, preventing bacteria from multiplying and spreading. ONLOX 200 is effective against a wide range of infections, including urinary tract infections (UTIs), respiratory tract infections, skin infections, gastrointestinal infections, and sexually transmitted infections like gonorrhea.

The typical dosage is 200 mg, taken once or twice daily, depending on the severity of the infection. Common side effects may include nausea, diarrhea, dizziness, or headache. Serious side effects are rare but can include tendonitis or tendon rupture. ONLOX 200 should be taken as prescribed by a healthcare provider to avoid resistance and complications.

#### **9) ONLOX OZ Tablets**

**Product Description :** ONLOX OZ contains ofloxacin and ornidazole, used to treat bacterial and parasitic infections, including gastrointestinal and respiratory infections.

**Product Details:** ONLOX OZ is a combination medication containing ofloxacin and ornidazole, primarily used to treat a wide range of bacterial and parasitic infections.

1. Ofloxacin is a fluoroquinolone antibiotic that works by inhibiting bacterial DNA synthesis, making it effective against various bacterial infections like urinary tract infections (UTIs), respiratory infections, and skin infections.

2. Ornidazole is an antiprotozoal and antimicrobial agent that treats infections caused by protozoa, such as amoebiasis, giardiasis, and certain anaerobic bacterial infections.

This combination is often prescribed for infections like gastrointestinal infections, dysentery, gynecological infections, and respiratory infections. ONLOX OZ should be taken as prescribed by a healthcare provider, and common side effects include nausea, dizziness, headache, or gastrointestinal discomfort. Serious side effects, though rare, may require medical attention.

#### 10) Mftal Tablets

**Product Description:** Mftal Tablets combines mefenamic acid and dicyclomine to relieve pain, inflammation, and muscle spasms, especially during menstrual cramps.

**Product Details :** Mftal tablets is a combination medication that contains mefenamic acid and dicyclomine, commonly used to treat pain and discomfort associated with menstrual cramps, abdominal pain, and other spasm-related conditions.

1. Mefenamic acid is a nonsteroidal anti-inflammatory drug (NSAID) that helps reduce inflammation, pain, and fever. It works by inhibiting enzymes that produce prostaglandins, which are responsible for pain and inflammation.
2. Dicyclomine is an antispasmodic that relaxes smooth muscle and reduces spasms in the gastrointestinal tract, helping to relieve cramping and discomfort.

Mftal Tablets is often prescribed for conditions like dysmenorrhea (painful menstruation), abdominal cramps, or irritable bowel syndrome (IBS). Common side effects include dizziness,
