Royal Sense Limited is excited to announce the official launch of our latest products in Pharmaceutical Category

Here are some details you might find in the launched products:

1) OPENTOP 40

Details: Pantoprazole 40 mg reduces stomach acid, treating GERD and ulcers by inhibiting proton pumps. It's a proton pump inhibitor.

Description

Pantoprazole 40 mg is a medication primarily used to treat conditions related to excessive stomach acid production, such as gastroesophageal reflux disease (GERD), Zollinger-Ellison syndrome, and peptic ulcers. It belongs to a class of drugs known as proton pump inhibitors (PPIs), which work by blocking the proton pumps in the stomach lining that produce acid. This reduction in stomach acid helps alleviate symptoms like heartburn and promotes the healing of the esophagus and stomach lining. Pantoprazole is typically taken orally, usually once daily, and can be prescribed for both short-term and long-term use. Common side effects may include headaches, diarrhoea, and nausea. It is important to follow the dosage prescribed by a healthcare provider to minimise potential side effects.

2) OPENTOP D

Details: Pantoprazole 40 mg reduces stomach acid treating GERD and ulcers by inhibiting proton pumps. It's a proton pump inhibitor, while domperidone 10 mg improves gastrointestinal motility and reduces nausea and vomiting.

Description

Pantoprazole 40 mg and domperidone 10 mg are often used together to address gastrointestinal issues. Pantoprazole is a proton pump inhibitor (PPI) that decreases stomach acid production, treating conditions like GERD, peptic ulcers, and Zollinger-Ellison syndrome. By reducing acid, it helps heal the esophagus and stomach lining and alleviates symptoms such as heartburn. Domperidone is a prokinetic agent that enhances gastrointestinal motility and helps relieve nausea and vomiting by facilitating gastric emptying and improving coordination of stomach contractions. This combination can be particularly effective for managing symptoms associated with delayed gastric emptying and acid-related disorders. Common side effects include headaches and gastrointestinal disturbances, so it's essential to use these medications under medical supervision.

3) CEFIX 200

Details:

Cefixime 200 mg is an oral antibiotic that treats bacterial infections like pneumonia, ear infections, and gonorrhea.

Description

Cefixime 200 mg is a broad-spectrum oral antibiotic used to treat a variety of bacterial infections. It belongs to the cephalosporin class of antibiotics, which work by inhibiting bacterial cell wall synthesis, thereby killing bacteria. Cefixime is effective against infections such as pneumonia, bronchitis, ear infections, throat infections, and urinary tract infections. It is also used for treating gonorrhea. The medication is typically taken once or twice daily, depending on the infection and the patient's condition. Common side effects include diarrhea, nausea, and abdominal pain. It's important to complete the full course of treatment as prescribed, even if symptoms improve, to prevent antibiotic resistance and ensure the infection is fully eradicated. Always follow a healthcare provider's instructions when using cefixime.

4) OPENTOP DSR

Details: Pantoprazole 40 mg reduces stomach acid treating GERD and ulcers by inhibiting proton pumps. It's a proton pump inhibitor, while domperidone 30 mg with delayed release property improves gastrointestinal motility and reduces nausea and vomiting for extended duration .

Description

Pantoprazole 40 mg is a combination medication that includes pantoprazole and domperidone. Pantoprazole is a proton pump inhibitor (PPI) that reduces stomach acid production, helping to treat conditions such as gastroesophageal reflux disease (GERD), peptic ulcers, and Zollinger-Ellison syndrome. Domperidone, a prokinetic agent, enhances gastrointestinal motility, reducing symptoms like nausea and vomiting. Together, they address both acid-related issues and digestive motility problems. Pantop DSR is commonly prescribed for patients experiencing symptoms related to excessive stomach acid and impaired digestion. It is usually taken orally, once daily, before meals. Common side effects may include headache, dry mouth, and gastrointestinal disturbances. It is essential to follow the prescribed dosage and consult a healthcare provider for proper usage.

5) OPENTOP L

ROYAL SENSE LIMITED

Registered Office: Plot No. 57, First Floor, Phase-II Badli, Industrial Estate, Badli Ind.,
Badli (North West Delhi), Delhi-110042

CIN: U21006DL2023PLC412051 **Email:** compliance@royalsense.in

Website: www.royalsense.in | **Contact No.:** +91-9205843102

Details: Opentop L combines pantoprazole 40mg and levosulpiride 75mg, reducing stomach acid and improving gastrointestinal motility, treating GERD and related symptoms.

Description:

Opentop L is a combination medication that includes pantoprazole and levosulpiride. Pantoprazole is a proton pump inhibitor (PPI) that decreases stomach acid production, effectively treating conditions such as gastroesophageal reflux disease (GERD), peptic ulcers, and Zollinger-Ellison syndrome. It helps in alleviating heartburn and promoting healing of the esophagus and stomach lining. Levosulpiride, a prokinetic agent, enhances gastrointestinal motility, which helps relieve symptoms such as nausea, vomiting, and abdominal discomfort by improving the movement of the digestive tract. This combination addresses both excessive acid production and motility issues. Pantop L is typically prescribed for managing symptoms associated with acid reflux and digestive disturbances. Common side effects may include headache, gastrointestinal disturbances, and dizziness. Always follow the prescribed dosage and consult a healthcare provider for proper use.

About Royal Sense Limited: Royal Sense Limited is a leading provider of innovative diagnostic solutions for healthcare professionals worldwide. With a focus on quality, reliability, and accessibility, we are dedicated to improving patient care and advancing the field of medical diagnostics.
